

Aluminium Finger Splints Padded with Foam

Padded aluminum finger splints immobilize and protect the finger or thumb, treating injuries like **broken fingers, sprains, dislocations, mallet finger, trigger finger and tendonitis** while also supporting joints affected by arthritis or used post-surgery to maintain correct alignment and promote healing. The malleable aluminum allows molding to the finger's shape, and the foam padding provides comfort and prevents pressure sores.

These splints work by holding bones and joints in place, preventing movement that could worsen an injury, and allowing the healing process to occur.

Features:

- **Malleable Aluminium:** Can be bent and shaped for a custom fit.
- **Foam Padding:** Adds cushioning, comfort, and protects the skin.
- **Immobilization:** Holds the finger in a specific, stable position.
- **Multi-purpose splints:** be easily cut and contoured to desired shape.
- **Closed cell foam pads** one side of each strip.
- **Splint shapes** easily and can be cut with scissors
